Preventative Maintenance Database

Preventative Maintenance is essential for recommending due services to customers. This database works side-by-side with the Service Review to help upsale services and items.

VIN Database

Speed up ticket entry by automatically populating the Year, Make, Model and Engine Type from the vehicle's VIN code. Pair this with the handheld scanner for a speedy checkout!

Additional Databases

- Fuel Filter Database
- Cabin Air Filter Database
- Serpentine Belt Database

Signature Pad

The signature pad allows an employee to digitally capture a customer's signature during the checkout process. This can save paper and improve your professional looking store.

Credit Card Reader

You can now swipe a customer's credit card during checkout, eliminating the use of an outside credit card machine and providing high-speed credit card authorization. Don't forget about the time saved when reconciling your cash drawer!

Oil Light Reset

No more flipping through pages and pages to find the Oil Light Reset information for a vehicle. You can now easily view the Oil Light Reset information, with diagrams, from the main ticket screen.

Verifone Pin Pad

The Verifone Pin Pad can be used to quickly process Debit Cards at checkout. The Pin Pad is easily configured and fully integrates with the eLube software.

Fingerprint Reader

Fingerprint technology can be used to increase the security in your shop. It can be used to clock employees in / out, be sure the correct person is voiding tickets, adjusting the inventory, reprinting invoices, and many other uses!

Handheld Scanner

The handheld scanner allows an employee to scan a vehicle's VIN code, which automatically fills the Year, Make, Model and Engine. Use the scanner to create a ticket and add services to the ticket from anywhere in your shop!
